Class Project – Instructions for progress report Advanced Machine Learning

Yannet Interian

February 18, 2020

A paper describing your project is due Feb 22nd 2020. This is the draft of the final project report due in the last week of class. The paper has a 5 pages limit (you can add details in an appendix). Use the following sections for your report.

- Abstract: provide a 1-2 paragraph summary of the paper.

- Team: team name, team members, kaggle ids.

- Description of your dataset and EDA.

- Details of your feature engineering and machine learning methods.

- Experimental results.

- List the responsibilities of each person in the group.

- Link to your repo.

- Appendix if needed.

I will use the following elements to evaluate the final report:

- Presence of the expected content listed above.

- Quality of your experiments, feature engineering and machine learning methods used.

- Overall organization clarity and quality.

- Clarity and quality of your code.

Use this additional advice:

- Write an actual paper that flows and is a pleasure to read instead of write up a list of bullet points.

- Use title and caption pictures clearly.

- Don't insert screenshots of images.

- Place adequate text between figures and tables.
